TOTAL WATER MANAGEMENT PROGRAM

STOP GUESSING --- KNOW THE FACTS.

Water makes your business possible. The quality of your water is directly reflected in the quality of the car wash you deliver to your customers. Understand the total picture of your wash operations with the Total Water Management Program (TWMP) from Ryan Technology.

Option A: Water Profile with Recommendations

The Technology Water Management Program (TWMP) provides you with a profile of 41 specific characteristics of your water. The profile covers information on your incoming water and outgoing water. This information helps you understand your water quality and the effects on your wash quality and wash equipment.

Along with your profile, you will receive written recommendations on how to treat your water to minimize the effects of water damage to your equipment, and deliver the highest quality wash to your customers.

The recommendations include specific actions and/or equipment needed, as well as estimated costs based on our recommendations.

Option B: Annual Maintenance Program

Each year a test kit and questionnaire will be sent to your location automatically. You complete the questionnaire and collect water samples. We deliver your water profile, recommendations, and TWMP seals for display. Each year your water will be certified and tuned for optimum performance.

Option C: Water Profile

The TWMP provides you with a report on 41 specific characteristics of your water and will provide information on your incoming as well as outgoing water. This information will show you the acceptable ranges of each item tested and where your water fits within those ranges.
